

Fabulous Fall Tips For You and Your Home

Insulate those pipes to prevent them from freezing when the temperatures drop!

Seal any drafts in your home to prevent energy loss.

Make sure your ceiling fan is rotating clockwise. This helps circulate the warm air around the room.

Clean those gutters. Clogged gutters make for messy problems when they back up and seep into your home.

Cover the outside hose bibs. This can help keep those pipes nice and warm when it gets cold outside!

Check and replace those dirty air filters.
